Education

Master in Mathematical Engineering 2016 2017
Universidad Complutense de Madrid (UCM) 7.26/10

Degree in Computer Enginering 2011 - 2016
Universidad Autónoma de Madrid (UAM) 8.68/10

Degree in Mathematics 2011 - 2016
Universidad Autónoma de Madrid (UAM) 7.54/10

Personal projects

- **Elasticsearch containerized cluster:** It creates custom images for Elasticsearch and deploys them in clusters using Docker, Kubernetes, Terraform, and AWS.
- **Monitoring tool**: Monitoring cpu and memory consumption by system processes with nmon and python.
- **Portfolio website**: Built with Angular, typescript, and scss. It is easily customizable to add new sections and projects.
- **Bachelor's thesys - Tumor growth simulation mode**l: Model for simulating tumor growth in collaboration with the Faculty of Medicine at UAM, using technologies such as C++ and R.

About Me

Full Stack Developer with 9 years of experience building and scaling critical backend architectures and web applications. Experienced in designing and managing production Elasticsearch clusters and cloud environments on AWS. Proven team coordinator with expertise in CI/CD and DevOps, and a key driver of the adoption and integration of AI-powered development tools across engineering workflows.

Experience

Full Stack Developer **Remote**
Lynx Tech (Financial Crime) Jan 2023- currently

- Spearhead the integration of Claude AI into engineering workflows to improve developer productivity.
- Design and sized Elasticsearch production clusters for 4 major international banks, managing 30+ TB of data across 20+ nodes.
- Engineer core backend features for real-time financial systems, delivering high-throughput processing with <100ms response time.
- Architect automated CI/CD pipelines and testing frameworks (Pytest/Google Test), achieving 80% code coverage across unit and end-to-end tests.
- Manage client-facing maintenance, issue resolution, and feature deployments in enterprise Linux (Red Hat) environments.
- Contributed to the migration of critical banking applications to AWS, supporting the organization's cloud transformation.

Software analyst **Madrid, Spain**
Instituto Ingenieria Conocimiento (IIC) May 2017- Jan 2023

- Engineered backend enhancements and novel features in Linux environments for high-performance financial systems.
- Maintained high-availability Elasticsearch clusters and directed critical technical communications with enterprise banking clients.
- Automated infrastructure testing and deployment scripts, significantly increasing deployment reliability and CI/CD efficiency.

Skills

- **Programming languages or frameworks:** C, Python, Bash, awk, Typescript, Angular, C++, HTML, CSS, SQL
- **Software and other technologies**: Elasticsearch, Kibana, AWS, docker, Kubernetes, Terraform
- **CI/CD tools**: Gitlab, Gitlab Pipelines, Github, Sonarqube, Jenkins, Pytest, Google Test
- **AI tools:** Claude Code, Codex, notebookLM

Languages

- Spanish: native
- English: C1 (studying to reach C2)
